

MATHEMATICS (MATH)

This is a list of the Mathematics (MATH) courses available at KPU.

MATH 1112 CR-3

Pre-Calculus Algebra

Students will study the concept of function in depth. In particular they will study polynomial, rational, exponential, logarithmic and trigonometric functions, and their graphs.

Prerequisites: (MATQ 1093 or MATH 1117) or (ABEM 0011 or MATP 1011 or MATQ 1099 with a B-) or Pre-calculus 12 with a C; or Principles of Mathematics 12 with a C; or Pre-calculus 11 with a B; or Principles of Mathematics 11 with a B; or Pre-calculus 11 with a C plus Mathematics Placement Test; or Principles of Mathematics 11 with a C plus Mathematics Placement Test; or Pre-calculus 12 with a P plus Mathematics Placement Test; or Principles of Mathematics 12 with a P plus Mathematics Placement Test; or Applications of Mathematics 12 with a C plus Mathematics Placement Test; or Applications of Mathematics 11 with a C plus Mathematics Placement Test Transferable (refer to transfer guide)

MATH 1115 CR-3

Statistics I

Students will summarize and display data and perform inferences about proportions, means and standard deviations for one and two populations. They will also perform regression analysis, and determine probabilities.

Prerequisites: MATQ 1093 or MATH 1117 or (ABEM 0011 or MATP 1011 or MATQ 1099 with a B-); or Pre-calculus 12 with a C; or Principles of Mathematics 12 with a C; or Pre-calculus 11 with a B; or Principles of Mathematics 11 with a B; or Pre-calculus 11 with a C plus Mathematics Placement Test; or Principles of Mathematics 11 with a C plus Mathematics Placement Test; or Pre-calculus 12 with a P plus Mathematics Placement Test; or Principles of Mathematics 12 with a P plus Mathematics Placement Test; or Foundations of Math 12 with a C; or Foundations of Math 11 with a B; or Applications of Mathematics 12 with a C plus Mathematics Placement Test; or Applications of Mathematics 11 with a C plus Mathematics Placement Test Transferable (refer to transfer guide)

MATH 1116 CR-3

Mathematical Explorations

Students will study the structure and development of Mathematics from the point of view of the non-mathematician. They will study historical material on the development of classical mathematical ideas as well as the evolution and structure of more recent mathematics, gaining an appreciation of historical and contemporary mathematical thinking.

This is an exploratory course in mathematics for students who have minimal mathematical background and whose major interests lie outside of the sciences. This course can be used to partially fulfill the quantitative requirement of the BA degree. It may not be used as a prerequisite for further Mathematics courses.

Prerequisites: MATQ 1093 or MATH 1117 or (ABEM 0011 or MATP 1011 or MATQ 1099 with a B-) or Principles of Mathematics 11 with a C or Applications of Mathematics 11 with a C; or Pre-calculus 11 with a C or Foundations of Math 11 with a C Transferable (refer to transfer guide)

MATH 1117 CR-3

Environmental Mathematics

Students will study algebraic concepts and methods, making use of them in general and environmental problem solving. They will study basic geometry and trigonometry, as well as functions (polynomial, rational, exponential, and logarithmic).

Prerequisites: MATQ 1092 or ABEM 0010 or MATP 1010; or Pre-calculus 12 with a P; or Principles of Mathematics 12 with a P; or Pre-calculus 11 with a C; or Principles of Mathematics 11 with a C; or Applications of Mathematics 12 with a C; or Foundations of Math 11 with a C+; or Mathematics Placement Test Transferable (refer to transfer guide)

MATH 1120 CR-3

Differential Calculus

Students will learn to differentiate algebraic and elementary transcendental functions and to apply these skills to graphing, maxima and minima, related rates, and rectilinear motion. They will be introduced to parametric curves and their differential calculus

Prerequisites: MATH 1112 or Pre-calculus 12 with a B; or Principles of Mathematics 12 with a B; or Pre-calculus 12 with a C plus Mathematics Placement Test; or Principles of Mathematics 12 with a C plus Mathematics Placement Test Transferable (refer to transfer guide)

MATH 1130 CR-3

Calculus for Life Sciences I

Students will study differential calculus and its applications to biological sciences. In particular, they will study limits and differentiation of algebraic and elementary transcendental functions, with applications to graphing and optimization.

Prerequisites: MATH 1112 or Pre-calculus 12 with a C+; or Principles of Mathematics 12 with a C+; or Pre-calculus 12 with a C plus Mathematics Placement Test; or Principles of Mathematics 12 with a C plus Mathematics Placement Test Transferable (refer to transfer guide)

MATH 1135 CR-3

Problems and Concepts

Students will develop skills in solving mathematical problems. They will study propositional and quantifier logic and apply this knowledge to solving problems and to elementary set theory, including relations and functions.

Prerequisites: Pre-calculus 11 with a B; or Principles of Mathematics 11 with a B; or Pre-calculus 12 with a C; or Principles of Mathematics 12 with a C
Co-requisites: MATH 1112 (not required if you have Pre-calculus 12 with a C+ or Principles of Mathematics 12 with a C+) MATH 1112 (not required if you have Pre-calculus 12 with a C+ or Principles of Mathematics 12 with a C+) Transferable (refer to transfer guide)

MATH 1140 CR-3**Calculus I (Business Applications)**

Students will study the differentiation of algebraic and elementary transcendental functions and apply these skills to graphing, finding maxima and minima and solving problems in business, economics and social sciences. Students will also study first and second order partial derivatives

Prerequisites: MATH 1112 or Pre-calculus 12 with a C+; or Principles of Mathematics 12 with a C+; or Pre-calculus 12 with a C plus Mathematics Placement Test; or Principles of Mathematics 12 with a C plus Placement Test
Transferable (refer to transfer guide)

MATH 1152 CR-3**Matrix Algebra for Engineers**

Students will solve systems of linear equations, and study the algebra of matrices, determinants, invertibility, eigenvalues and eigenvectors, diagonalizability and systems of linear Ordinary Differential Equations (ODE's). They will study the geometry of Euclidean space, dot and cross products, the arithmetic of complex numbers, exponentials and logarithms of complex numbers, and the complex plane. Students will use a Computer Algebra System to solve problems in matrix algebra.

Prerequisites: (MATH 1120 or MATH 1130 with a C+) or (MATH 1140 with a B-) or MATH 1230 or MATH 1240
Transferable (refer to transfer guide)

MATH 1190 CR-4**Mathematics for Elementary School Teachers**

Students will study the theory and applications of arithmetic, geometry and data analysis (statistics). This course is designed for students planning a career as an elementary school teacher.

Prerequisites: Students who satisfy either (1) or (2) below are eligible to take MATH 1190. (1) MATH 1112 or Pre-calculus 12 with a C+; or Principles of Mathematics 12 with a C+ ; or Pre-calculus 12 with a C plus Mathematics Placement Test; or Principles of Mathematics 12 with a C plus Mathematics Placement Test OR (2) 18 Kwantlen Polytechnic University credits numbered 1100 or higher (or equivalent), or any university degree that is recognized by Kwantlen Polytechnic University, plus [MATQ 1093 or MATH 1115 or 1116 or 1117; or (MATP 1011 or ABEM 0011 or MATQ 1099 with a B-); or Pre-calculus 12 with a C; or Principles of Mathematics 12 with a C; or Pre-calculus 12 with a P plus Mathematics Placement Test; or Principles of Mathematics 12 with a P plus Mathematics Placement Test; or Pre-calculus 11 with a B; or Principles of Mathematics 11 with a B; or Pre-calculus 11 with a C plus Mathematics Placement Test; or Principles of Mathematics 11 with a C plus Mathematics Placement Test; or Foundations of Math 12 with a C; or Foundations of Math 11 with a B]
Transferable (refer to transfer guide)

MATH 1220 CR-3**Integral Calculus**

Students will learn to integrate algebraic and elementary transcendental functions and to apply these skills to appropriate problems. In addition, they will learn the fundamental theorem of calculus, the integral calculus of parametric curves, Taylor polynomials, sequences and series and simple differential equations.

Prerequisites: MATH 1120 or MATH 1130 with C + or better or MATH 1140 with a B- or better
Transferable (refer to transfer guide)

MATH 1230 CR-3**Calculus for Life Sciences II**

Students will study integral calculus and its applications to biological sciences. In particular, they will study the techniques of integration, including integration by parts and partial fractions; differential equations, including systems of linear differential equations; and mathematical models in the biological sciences.

Prerequisites: (MATH 1140 with a C+) or MATH 1120 or MATH 1130
Transferable (refer to transfer guide)

MATH 1240 CR-3**Calculus II (Business Applications)**

Students will study the integration of algebraic and elementary transcendental functions and apply these skills to solving problems in business, economics and social sciences. They will also study multivariate differential calculus, differential equations, matrix algebra and linear programming.

Prerequisites: MATH 1120 or MATH 1130 or MATH 1140
Transferable (refer to transfer guide)

MATH 2232 CR-3**Linear Algebra**

Students will study systems of linear equations, matrices, determinants, eigenvalues and eigenvectors, dot products, the Gram-Schmidt process, vector and scalar projections, lines and planes in Euclidean space. Students will also study vector spaces, including general vector spaces and subspaces, linear independence, spanning sets, bases, and linear transformations. Students will write simple proofs.

Prerequisites: MATH 1120 or (MATH 1130 with a C+) or (MATH 1140 with a B-) or MATH 1230 or MATH 1240
Transferable (refer to transfer guide)

MATH 2315 CR-3**Probability and Statistics**

Students will study introductory probability and statistics using a background of calculus. Topics include concepts of randomness, probability, probability distributions for discrete and continuous random variables, descriptive statistics, multivariate distributions, laws of expectation, functions of random variables, statistical inference, and hypothesis testing. Distributions studied will include binomial, normal, t, chi-square, geometric, hypergeometry, exponential and Poisson distributions.

Prerequisites: MATH 1220 or MATH 1230 or MATH 1240
Transferable (refer to transfer guide)

MATH 2321 CR-3**Multivariate Calculus (Calculus III)**

Students will study the calculus of three dimensions. They will study vectors, lines, planes, cylinders and surfaces; vector functions, space curves and motion in space; and differential and integral calculus of functions of several variables. Students will study optimization, including Lagrange Multipliers. They will study rectangular, polar, cylindrical, spherical and general coordinate systems. Students will study applied problems and use of a computer algebra system.

Prerequisites: MATH 1220 (or MATH 1230 with a C+) (or MATH 1240 with a B-)
Transferable (refer to transfer guide)

MATH 2331 CR-3**Introduction to Analysis**

Students will study the theory that underlies calculus. In particular, they will study real numbers, limits of sequences, limits of functions, continuity, and will learn how to construct proofs involving these concepts.

Prerequisites: MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)

Transferable (refer to transfer guide)

MATH 2335 CR-3**Statistics for Life Sciences**

Students will learn statistical techniques and their application to life sciences. They will study descriptive statistics, elementary probability, probability distributions, in particular, the binomial, normal, t and chi-square distributions, confidence intervals and hypothesis testing for population means, and proportions, as well as for differences in population means and proportions. Students will also study linear regression, and the chi-square goodness of fit test.

Prerequisites: MATH 1130 or MATH 1120 or MATH 1140

Transferable (refer to transfer guide)

MATH 2341 CR-4**Introduction to Statistics for Business**

Students will learn statistical techniques and their application to business and economics. They will study descriptive statistics, elementary probability, random variables, sampling distributions, linear regression, correlation, estimation and hypothesis testing. They will also learn how to apply statistical software to descriptive and inferential statistics. Distributions studied will include binomial, normal, t- and chi-square distributions.

Prerequisites: 9 credits numbered 1100 or higher and (MATH 1112 or Precalculus 12 or Foundations of Mathematics 12)

Transferable (refer to transfer guide)

MATH 2410 CR-3**Discrete Mathematics**

Students will study the basic techniques of discrete mathematics, including methods of logic, formal reasoning, induction, recursion, counting, functions and relations, modular arithmetic, and structures such as graphs and trees.

Prerequisites: MATH 1120 or MATH 1130 or MATH 1140 or CPSC 1103

Transferable (refer to transfer guide)

MATH 2721 CR-3**Complex Numbers and Linear Algebra**

Students will use row reduction to solve systems of linear equations. They will study the algorithms for matrix multiplication, inversion, transposition, determinants, eigenvalues and eigenvectors, and diagonalization, and apply these skills to practical problems. They will study the geometry of Euclidean space. They will study the arithmetic, exponentials and logarithms of complex numbers, and use them to solve a variety of applied problems in physics and engineering. Students will use a Computer Algebra System to solve problems in matrix algebra.

Prerequisites: MATH 1220 or MATH 1230

Transferable (refer to transfer guide)

MATH 2821 CR-3**Multivariate and Vector Calculus**

Students will study the principles of multivariate and vector calculus. They will study surfaces, partial derivatives, gradients, and multiple integrals in polar, cylindrical, and spherical coordinate systems. Students will also study derivatives of vector-valued functions, differential operators, line integrals and Green's theorem, surface integrals including the divergence and Stokes' theorems, conservative fields, and potentials, with an emphasis on applications.

Prerequisites: (MATH 1220 or MATH 1230) and (MATH 2721 or MATH 1152)

Transferable (refer to transfer guide)

MATH 3120 CR-3**Introduction to Applied Mathematics**

Students will learn a wide range of mathematical techniques and methods useful in applied mathematics. They will study Fourier series, Fourier integrals, Laplace and Fourier transforms; the gamma, beta, and error functions; Bessel functions, Dirac delta function, Legendre, Hermite, and Laguerre polynomials. They will also study an introduction to higher-order partial differential equations and their solutions by integral transforms and Green's Functions.

Prerequisites: MATH 2321 and (MATH 2232 or MATH 1152)

Transferable (refer to transfer guide)

MATH 3130 CR-3**Introduction to the Mathematics Classroom**

Students will study and implement theories related to the teaching of mathematics. They will review and investigate current and past mathematics teaching practices. They will complete a project that integrates theory with practice and produce a portfolio of written work. Students will be required to apply theory through activities such as tutoring mathematics, assisting in a classroom, or developing curriculum materials.

Co-requisites: MATH 2232, MATH 2321, MATH 2331, MATH 2410, and EDUC 2220 MATH 2232, MATH 2321, MATH 2331, MATH 2410, and EDUC 2220

Transferable (refer to transfer guide)

MATH 3150 CR-3**The Structure of Mathematics**

Students will study the underlying structure of mathematics, including mathematical symbolism, introduction to set theory and introduction to logic. They will develop an understanding of methods of proof and an appreciation for the structure of mathematics.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and MATH 2232

Transferable (refer to transfer guide)

MATH 3160 CR-3**Group Theory**

Students will study the fundamental concepts and results of group theory. They will study groups and subgroups, Lagrange's theorem, homomorphisms, normal subgroups, factor groups, Cauchy's theorem and direct products.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and MATH 2232

Transferable (refer to transfer guide)

MATH 3170 CR-3**Complex Variables**

Students will study complex numbers, functions of complex numbers, analytic functions, Cauchy-Riemann equations, elementary functions, contour integration, Cauchy's integral theorem and formula, series

representations of analytic functions, poles and residues, with applications to physics and engineering.

Prerequisites: (MATH 2232 or MATH 1152 or MATH 2721) and (MATH 2321 or MATH 2821)

Transferable (refer to transfer guide)

MATH 3250 CR-3**Geometry**

Students will study Euclidean and other geometries, and construct geometrical proofs and objects. They will apply geometric concepts and reasoning to practical problems.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and MATH 2232

Transferable (refer to transfer guide)

MATH 3315 CR-3**Inferential Statistics**

Students will study the theory of statistical inference. They will study Analysis of Variance (ANOVA), multivariable distributions, distributions of functions of random variables, limiting distributions, inference, maximum likelihood, Bayes' estimation, Fisher information, and likelihood ratio tests.

Prerequisites: MATH 2315 and MATH 2321

Transferable (refer to transfer guide)

MATH 3322 CR-3 (formerly MATH 2322)**Vector Calculus (Calculus IV)**

Students will study the calculus of vector valued functions and vector fields. They will study derivatives of vector valued functions, the chain rule, Jacobians and invertibility, differential operators, line integrals and Green's theorem, surface integrals including divergence and Stokes' theorems, path independence and conservative fields and potentials.

Prerequisites: (MATH 2232 or MATH 1152) and MATH 2321

Transferable (refer to transfer guide)

MATH 3421 CR-3 (formerly MATH 2421)**Ordinary Differential Equations**

Students will study solving first order differential equations, Laplace transforms, systems of linear differential equations, plane autonomous systems and stability, and applications of differential equations. Students will also use a computer algebra system and graphical methods in studying differential equations.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and (MATH 2232 or 1152)

Transferable (refer to transfer guide)

MATH 3431 CR-3**Partial Differential Equations**

Students will study the wave equation, the heat equation, Laplace's equation, and other classical equations of mathematical physics. They will study Fourier series and Fourier transforms, Sturm-Liouville Theory, Laplace transforms and partial differential equations in polar coordinates.

Prerequisites: MATH 3421

Transferable (refer to transfer guide)

MATH 3450 CR-3**History of Mathematics**

Students will study the aspects of the history of mathematics from its earliest beginnings in solving concrete problems through the development of abstraction and rigour in the nineteenth and early twentieth centuries. They will examine and analyze both the growth of ideas and the context in which they developed, with emphasis on the mathematics taught in secondary school and the first two years of university study.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and MATH 2232

Transferable (refer to transfer guide)

MATH 4130 CR-3**Theory of Mathematics Education**

Students will explore theories and trends in mathematics education. They will survey significant historical, philosophical, psychological and societal factors influencing the development of mathematics education as a field of inquiry, and will critically examine and discuss current theories and research in mathematics instruction. They will investigate problem solving, reasoning and communication in mathematics.

Prerequisites: MATH 2232, MATH 2321, MATH 2331, MATH 2410, and EDUC 2220

Transferable (refer to transfer guide)

MATH 4150 CR-3**Number Theory**

Students will study the following topics: divisibility, properties of types of integer numbers, primes, congruences, Diophantine equations, primitive roots, and quadratic residues.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and MATH 2232

Transferable (refer to transfer guide)

MATH 4190 CR-3**Introduction to Point-Set Topology**

Students will study the fundamental concepts and results of point-set (general) topology. They will study sets, relations and functions, order, cardinality, Axiom of Choice, topological spaces, bases and subbases, continuity and homeomorphisms, metric spaces, countability and compactness.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and MATH 2232 and MATH 2331

Transferable (refer to transfer guide)

MATH 4210 CR-3**Biomathematics**

Students will study mathematical modelling and data analysis for biological systems. They will focus on developing and analysing dynamic models of biological systems and processes. They will study the mathematics of population dynamics, models of metabolic processes, genomics and epidemiology.

Prerequisites: MATH 3421 and MATH 2315

Transferable (refer to transfer guide)

MATH 4240 CR-3**Mathematical Modelling**

Students will study the formation, analysis, and interpretation of mathematical models drawn from the physical, biological, economic, and social sciences. They will study continuous and discrete, deterministic and stochastic models. Students will use techniques such as time series analysis, differential and difference equations, matrix analysis, optimization, simple stochastic processes, and numerical methods. Note: Students are required to have a portable computer able to run software as designated by the instructor.

Prerequisites: MATH 2321 and MATH 2315 and (MATH 2232 or MATH 1152)

Transferable (refer to transfer guide)

MATH 4250 CR-3**Special Topics in Mathematics**

Students will study a particular advanced topic in mathematics, depending upon student interest and faculty availability.

Note: Students may take this course multiple times for further credit on different topics.

Prerequisites: [MATH 1220 or (MATH 1230 with a C+) or (MATH 1240 with a B-)] and MATH 2232

Transferable (refer to transfer guide)

MATH 4350 CR-3**Senior Project**

Students will complete a substantial research project under the supervision of an instructor. They will identify relevant sources of information, in the form of a literature search and review, and submit a final paper investigating a research question.

Note: The student's topic must be approved by the Mathematics Department.

Prerequisites: 9 MATH credits at the 3000-level or higher

Transferable (refer to transfer guide)
