

MATH FOR TRADES (MATT)

This is a list of the Math for Trades (MATT) courses available at KPU.

MATT 1002 CR-5

Math for Building Trades 1

First-year apprenticeship students in masonry and carpentry will learn the basic math needed for those trades.

MATT 1004 CR-5

Math for Building Trades 2

Second-year apprenticeship students in masonry and carpentry will learn the measurement skills and related formulas needed for those trades.

Prerequisites: MATT 1002

MATT 1006 CR-5

Math for Building Trades 3

Third-year apprenticeship students in masonry and carpentry will learn the estimating skills and related formulas needed for those trades.

Prerequisites: MATT 1004

MATT 1008 CR-5

Math for Building Trades 4

Fourth-year apprenticeship students in masonry and carpentry will review all the math skills needed for those trades. They will also learn the math and science underlying safe use of job-related rigging and lifting machines.

Prerequisites: MATT 1006

MATT 1010 CR-1.5

Math for Entry Level Building Trades

Entry-level students in masonry and carpentry will learn the basic math needed for those trades. They will also learn the math and science underlying safe use of job-related rigging and lifting machines.

Prerequisites: ABEM 0008 or MATP 1008 or Essentials of Math 11 (C) or assessment

MATT 1015 CR-3 (formerly MFAB 1106)

Mathematics/Science for Manufacturing and Mechanical Trades 1

Students will learn to use whole numbers, decimals, fractions, proportions, percentages, equations, formulas, measurement, geometry, Pythagoras' theorem and right angle trigonometry in the context of manufacturing and mechanical trades. They will apply electrical, metallurgical, and other scientific principles and will be prepared to the National Occupational Analysis standard for these trades.

Prerequisites: ABEM 0008 or MATP 1008 or Vocational Placement Test

MATT 1025 CR-3 (formerly MFAB 1205)

Mathematics/Science for Manufacturing and Mechanical Trades II

Students will apply the principles of geometric constructions, Pythagoras' theorem, and trigonometry to the manufacturing and mechanical trades, and will use these principles to solve fabrication layout problems and to estimate manufacturing costs using industry-standard methods. They will apply electrical, metallurgical, and other scientific principles. Students will be prepared to the National Occupational Analysis standard for these trades.

Prerequisites: MATT 1015 or MFAB 1105 or MFAB 1106 or permission of the instructor

MATT 1081 CR-1.5

Basic Mathematics for Welders

Welding students in level C will learn the basic math skills needed in this trade. They will learn to apply these skills in various situations, including calculations for safe rigging and lifting.

Prerequisites: ABEM 0008 or MATP 1008 or MATQ 1091 or Essentials of Math 11 (C) or Apprentice & Workplace Mathematics 11 (C) or assessment

Not Transferable
