Psychology Honours Program: PSYC 5000 and 5010

Q: What is honours?

A: Those interested in further study and graduate school or who prefer more extensive research experience may augment their knowledge and skills by taking the research- focused Honours program in Psychology. The Honours program gives students a chance to develop and report on a research project under the supervision of a faculty member within the Psychology Department. The Honours program requires 12 credits (2 courses) which can be completed within the credits required for your psychology degree.

Q: Why do it?

A: Psychology graduates work in various roles such as: group home coordinator, behaviour analyst, residential youth counselor, loans officer, and customer relations representative, to list but a few examples. More specific careers in psychology (e.g., clinical or counselling psychology, experimental psychology) require further study at the graduate level and the Honours program is vital for admission to most Psychology graduate programs.

Q: When do I need to start thinking about honours?

A: It is never too early to start thinking about Honours! By 3rd year you should begin chatting with potential advisors and you should complete both prerequisites (Psychology 3300 and Psychology 3400). Students must apply to the Honours program in the Spring of the year they intend to begin the program. The Honours program begins in the Fall.

Q: What are the prerequisites?

A: To be admitted to the Honours program students must achieve and maintain a cumulative GPA of 3.3 and obtain a 'B+' grade in both PSYC 3300 (Advanced Statistics) and PSYC 3400 (Advanced Research Methods). Students must also obtain endorsement from a faculty member who will serve as their thesis advisor, and be recommended by the Psychology Honours selection committee. Admission to the program is competitive. Most faculty are eager to supervise honours students and you can find a list of interested faculty on the Psychology Faculty website: kpu.ca/arts/psychology/honours

Faculty Research Interests:

- lifespan cognition; social cognition; theory of mind; hindsight bias; false memory
- culture, ethnicity, identity; gender issues; youth violence, gang involvement; applied/community social psychology
