Misha and Sara are planting a small orchard in their backyard. They have seven trees to plant: 3 apple, 2 peach, and 2 cherry. Misha insists that they need to have six

rows with three trees in each row. Sara counters that they do not have enough trees and do not have enough money to buy more trees. Misha answers, “Oh, but I know it can be done and with just seven trees.” How does Misha plan to place the seven trees?
