Chapter 1
Prerequisites
1.1 Real Numbers: Algebra Essentials

Verbal
1. Is $\sqrt{2}$ an example of a rational terminating, rational repeating, or irrational number? Tell why it fits that category.
   Irrational number. The square root of two does not terminate, and it does not repeat a pattern. It can’t be written as a quotient of two integers, so it is irrational.

2. -

3. What do the Associative Properties allow us to do when following the order of operations? Explain your answer.
   The Associative Properties state that the sum or product of multiple numbers can be grouped differently without affecting the result. This is because the same operation is performed (either addition or subtraction), so the terms can be re-ordered.

Two orders of 600 pounds are sold and the gravel is removed from the mound. At the end of the day, the mound has 1,200 pounds of gravel.

57. Write the equation that describes the situation.

65. A guy wire for a suspension bridge runs from the ground diagonally to the top of the closest pylon to make a triangle. We can use the Pythagorean Theorem to find the length of guy wire needed. The square of the distance between the wire on the ground and the pylon on the ground is 90,000 feet. The square of the height of the pylon is 160,000 feet. Verbal

1. If the terms of a polynomial do not have a greatest common factor, then does that mean it is not factorable? Explain.
   The terms of a polynomial don’t have to have a common factor for the entire polynomial to be factorable. For example, $4x^2$ and $-9y^2$ don’t have a common factor, but the whole polynomial is still factorable $4x^2 - 9y^2 = (2x + 3y)(2x - 3y)$.

2. -

3. How do you factor by grouping?
   Divide the $x$ term into the sum of two terms, factor each portion of the expression separately, and then factor out the GCF of the entire expression.

21. \((n - 2)(n^2 - 4n + 4)\)
   \[
   (n - 2)(n^2 - 4n + 4)
   \]
   Use the distributive property
   \[
   n^3 - 4n^2 + 4n - 2n^2 + 8n - 8
   \]
   Combine like terms
   \[
   n^3 - 6n^2 + 12n - 8
