Connection to eduroam with Windows 7

1) Click on the Wi-Fi icon (WiFi) in your system tray. In the resulting window, click on eduroam and click Connect.

2) You will be prompted for your login credentials.

   Enter your KPU email address as your username. Enter your PIN in the password field. Click OK.

   For example:

   Students: Username for students would look like jane.doe@email.kpu.ca

   Employees: Username for employees would look like jane.doe@kpu.ca

3) You will receive a Windows Security Alert, informing you that the connection could not be completed. Click on the Details button in the lower left corner.
4) Ensure that the Radius Server is either sac-radius-01.kpu.ca, sac-radius-02.kpu.ca, or rc-radius-01.kpu.ca. Also ensure that the Root CA is DigiCert. If both of those are true, click Connect in the lower right corner. After a few seconds, you should successfully connect to Kwantlen’s secure Wi-Fi network.

5) From your control panel, open Network and Sharing Center. If your control panel is in Category view, click on View network status and tasks under Network and Internet.

6) Click on Manage wireless networks in the left pane.
7) Select the eduroam network and press the **Move down** button. Lower its priority so the Kwantlen secure networks are used when they are within range.
