ASHLY PRASAD

I have been a proud Kwantlen student for over 3 years now. I am constantly looking for new and exciting endeavors in science. Wanting to expand my knowledge of human biology, I enrolled in Biology 1099 with Dr. Assogba. My scientific knowledge continued to grow throughout this course. The amount of information I have retained in such a short time astonishes me. This course required a lot of focus and work but in the end it was completely worth it. Being in this course not only helped me understand human biology, but it has given me the opportunity to use the knowledge I have acquired. Dr. Assogba and I are now developing a review article based on research surrounding HIV-1 and the functions of Ku. Needless to say, I am glad I chose to take Biology 1099.

“Being in this course not only helped me understand human biology, but it has given me the opportunity to use the knowledge I have acquired”
